GENERAL DIRECTIONS TO CUSTOMERS

ORDER EARLY. We aim to execute all orders as soon as received, but during the rush season from March to May and again from July to September, slight delays are unavoidable, which, however, can be largely overcome by patrons anticipating their wants and ordering and taking delivery of their requirements early.

SAFE ARRIVAL OF PACKAGES. We guarantee the safe arrival of all goods sent by express or mail to points within the United States.

WASHINGTON RESIDENTS must include 3% sales tax with remittance. This is required by the Washington State Tax Commission.

CASH WITH ORDER. Please send money with the order sufficient to cover the whole bill. We decline sending goods "Collect on Delivery" unless remittance be made on account to guarantee acceptance.

Please do not send personal check under \$1.50 unless you

add 10 cents for collection fee.

NON-WARRANTY. Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather or soil conditions, too deep or too shallow planting, etc., which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will, under proper conditions, produce satisfactory results, we will give no warranty as to description, quality or productiveness of any of the seeds, plants or bulbs we send out, and will not be in any way responsible for the crop, and every order for articles named in this catalogue will be executed on these conditions only. It must, however, be plain to everyone who gives the matter the slightest thought that it is to our best interests to send out only such stock as will not only grow, but prove true to name and description.

VISITORS always welcome. Iris season May 15th to June 15th. Delphiniums, middle of June through July. Dahlias, August until Frost.

Daffodils

DAFFODIL CULTURE

Daffodils thrive in any well-drained garden soil. They should be planted about 10 in. deep for the large bulbs, but the varieties which make small bulbs of course should not go in quite so deep. The soil should be prepared 6 in. below the bulbs—mix bone meal into the soil, but do not let any manure come in contact with the bulbs.

Daffodils look best planted in groups or drifts, with the bulbs placed 4 to 6 in. apart. They should be planted in early Sept. and in cold climates a mulch of leaves or straw after the ground has frozen is a good protection. The bulbs should be dug and divided every 2 or 3 years; digging the bulbs when the foliage is turning yellow, and lays on the ground. They may be replanted at once, or kept in storage until fall. Do not dig them in the fall.

Daffodils used for naturalizing in the grass or under trees need not be disturbed for years.

Do not water daffodils in the **summer** when they are dormant.

Tulips

TULIP CULTURE

Tulips should be planted during October or early November in most parts of the country. In the south best results are obtained by placing the bulbs in the home refrigerator, food storage compartment (not freezing) for 6 weeks and planting them early in December.

Good drainage is essential and a sunny location is best, though tulips will bloom in partial shade. It has been recommended to plant bulbs about 5 in. deep, but it is becoming more popular to plant about 9 or 10 in. deep. The bulbs will not split so much and for this reason better blooms will be produced for several years.

Prepare the soil about 6 in. below the bulbs using bone meal as fertilizer. While moles rarely molest the bulbs if planted this deep, mixing benzine hexychloride in the soil around the bulbs is a good precaution.

Our tulip prices are all for the extra large (12 cm. and up) bulbs. They will give you wonderful blooms.

EARLY FLOWERING TULIPS

These early tulips come in single and double, and are about 8 or 10 inches high. They are fine for border planting, and for pots, or window boxes, and are also used for rock gardens. The doubles are very showy, and resemble very double roses.
